

## Big Space Fractions

If possible draw a large circle or square outside using chalk – if you can't draw one then make one using string or rope.

If you have chalk then draw in different fractions – label each one – what is the equivalent decimal or percentage? Take photos!

If you have string or rope then find another way to represent your fractions/decimals/percentages – maybe you could fill in the space yourself by lying in your shape, or use more string/rope to mark each fraction – again label and take photos.

Challenge – make a fraction and get a member of your family to correctly identify it.
