

Monday:

What is the climate like in the rainforest?

LO: To understand what the climate of the rainforest is and how it is different to other environments we know

What does climate mean?

Weather is always changing. One day it will be sunny, and the next day it will be raining. Climate on the other hand is the average measurement of weather in a place over a long period of time.

Scientists often divide climates into five types:

- tropical
- dry
- mild
- cold
- polar

What type of climate does the UK have and why do you think this?

Read of the rainforest fact sheet

Describe the climate, what do you think are the rainforests main characteristics of its climate?

Take a look at these two pictures

Both habitats are very hot, but why do you think a rainforest has so much more life than a desert?

Tuesday

Now we have analysed the climate of the rainforest, your task is to create your own weather prediction

Imagine you are a weather reporter in the Amazon. What types of weather would you be reporting? How much sun/rain/other types of weather will there be? Use the fact sheet to help you

You can present this weather prediction in any way you like!
