

Wednesday - Calculating the perimeter of regular polygons.

Easier

Calculate the perimeter of these regular polygons:

Count the sides!

 <p>7 cm</p> <p>___ + ___ + ___</p> <p>___ x ___</p> <p>Perimeter =</p>	 <p>5 cm</p> <p>___ + ___ + ___ + ___</p> <p>___ x ___</p> <p>Perimeter =</p>	 <p>6 cm</p> <p>___ + ___ + ___ + ___ + ___</p> <p>___ x ___</p> <p>Perimeter =</p>	 <p>3 cm</p> <p>___ x ___</p> <p>Perimeter =</p>
--	--	---	---

Medium – Use the key to work out the perimeter of these shapes (show your working):

Key:

Remember:

The perimeter is the distance **all the way around** a 2D shape!

Look at the **bold** line - that's the perimeter!

Harder – Use the key to work out the perimeter of these shapes (show your working):

		<p>• = centre</p>
