

# SPACE

BY OLIVER SNOOK

IN SPACE THERE ARE MANY DIFFERENT PLANETS, GALAXY'S AND SOLAR SYSTEMS .WE LIVE IN THE MILKY WAY GALAXY WHICH INCLUDES PLANETS LIKE MARS, JUPITER, EARTH, SATURN AND NEPTUNE WE LIVE ON EARTH AND EARTH IS 70% WATER AND AS FAR AS SCIENTISTS KNOW IS THE ONLY ONE WITH LIFE ON . NOBODY CAN COPE GOING INTO SPACE WITHOUT A SPACE SUIT OR YOU WILL SUFFOCATE SO WHEN YOU PUT ON A SPACE SUIT YOU WILL HAVE A TANK OF AIR O THE BACK OF IT SO YOU CAN BREATH. AND NOW YOU GET SPACE SHIPS SO YOU CAN TRAVEL INTO SPACE BUT YOU CAN ONLY GO IF YOU ARE FULLY TRAINED NEIL ARMSTRONG WAS THE FIRST MAN IN THE WORLD TO STEP FOOT ON SPACE. IN SPACE IS WERE STARS GROW WHEN THEY DIE THEY SOMETIMES CAUSE SOMETHING DEADLY A BLACK HOLE THEY SUCK UP ANYTHING THAT GETS IN THERE WAY BUT SCIENTISTS CAN NOT REALLY FIND OUT

**MUCH ABOUT THEM BECAUSE THEY CAN NOT GET ROBOTS OR DRONES UP THERE IF THEY MANAGE THEY WILL JUST GET SUCKED UP. THERE ALSO LOTS OF OTHER DANGEROUS THINGS IN SPACE LIKE ASTROIDS WHICH ARE MADE OUT OF IRON GOLD PLATINUM BRONZE AND SILVER. BUT THEY ARE REALLY POWERFUL THESE AND METIORS WIPED OUT THE DINOSAURS THE LONGEST LIVING LIFE FORM ON EARTH. AND IT IS NOW GETTING PULLOUTED SO WHEN THEY BRING OUT SOME NEW AWESOME TECH WE MIGHT EVEN LIVE THERE BUT AT THE MOMENT IT IS TO HOT TO LIVE ON.**
